

Decision tree of profile.xml

Sentence recognised

Command Words

“**boost**” and “Need a **boost** here” → Trigger: boost

“Please, **increase** the **speed**” and “**increase speed**” → Trigger: increase speed

“I need you to **increase** the **front shield**” and “**increase front shield**” → Trigger: increase front shield

Because of the dictation engine low accuracy, the **commands** are better recognised.
